ADAPTIVE TEACHING EVIDENCE RECORD

8MJT Latin — Consolidation Unit: Grammar Confidence and the Beasley Method

⚠ ***DEMONSTRATION DOCUMENT — Student names are fictional (ECW wrestlers). All data is illustrative.***

Subject	Latin — GCSE Eduqas Specification
Units Covered	Unit 1.1: A Roman Daughter · Unit 1.2: Gods, Ghosts, and Blood
Class	8MJT (Year 8)
Teacher	Mr Beasley
Document Type	Living Document — updated throughout the academic year
Last Updated	27 March 2026

1. Purpose of this Document

This document exists to evidence the decision-making process of the class teacher throughout the consolidation unit for Units 1.1 and 1.2 in Latin GCSE. It is designed to meet the specific line of enquiry common in Ofsted inspection of high-achieving cohorts: not ‘what were the outcomes?’ but ‘how did the teacher’s interventions produce those outcomes?’

In a selective cohort where examination results are broadly strong across the group, outcomes alone cannot demonstrate the quality of teaching. This record provides the causal chain that connects diagnosis to intervention to impact — for the class as a whole, for groups of students, and for individuals.

The document also functions as a forward-planning tool. The RAG system applied to strategies and lesson responses allows the teacher to identify what is working, what needs refining, and what should inform future units. Where a student does not achieve their potential, this record demonstrates that the teacher identified the issue, responded with a specific strategy, and monitored its impact.

This document is the narrative record. Quantitative data (marks, assessment scores, diagnostic results) is held in the accompanying RAG Intervention Tracker spreadsheet and should be cross-referenced throughout.

2. Unit Rationale and Teaching Decision

2.1 Curriculum Intent — Why These Units at This Point in the Course

Units 1.1 and 1.2 are the students' introduction to GCSE Latin. The decision to begin with narrative-embedded grammar rather than a rules-first approach is deliberate and grounded in research on language acquisition. By embedding grammar within compelling human stories — a father's decision over an infant daughter; a man haunted by the ghost of a childhood friend — students encounter forms in a context that generates genuine desire to understand.

Diagnostic evidence from both units shows that students demonstrate secure recognition of grammar forms in isolation but apply this knowledge inconsistently in connected text. The consolidation unit is therefore a pedagogically necessary response: not remediation, but deepening. Students who can identify a dative in a paradigm table need to identify it automatically in a sentence they have never seen before.

2.2 Implementation — The Beasley Method: Pedagogical Basis

The core pedagogical decision in this unit is to teach students an explicit, named, step-by-step translation method — the Beasley Method — and to drill it until it becomes habitual.

- Latin encodes grammatical meaning in inflectional endings, not word order. A translation method that begins with word meaning will always be unreliable.
- High-achieving students are particularly susceptible to semantic inference because their strong vocabulary allows plausible translations without parsing — masking the underlying gap.
- Making the method explicit and named gives students a cognitive anchor under exam pressure: a defined procedure to return to rather than instinct.

The five steps: (0) count the verbs; (1) identify tense and person; (2) find the subject; (3) find the direct object; (4) label everything else by case and function before translating. Colour code: RED = verb, BLUE = subject, GREEN = object, YELLOW = rest. Drilling is game-based and competitive throughout.

2.3 Impact — Link to Eduqas Specification and Learning Outcomes

The Eduqas GCSE Latin specification requires students to demonstrate knowledge of all indicative active tenses and the three core noun declensions in both recognition and translation contexts. By the end of this unit, students should be able to: (1) parse any noun case in 1st, 2nd, and 3rd declension automatically in connected text; (2) identify all four tenses at speed; (3) apply the Beasley Method systematically to translate sentences of up to three clauses without prompting; (4) approach an unseen text with confidence and a clear analytical procedure.

- Grammar sequencing follows the Eduqas required grammar list: all six noun cases and all four tenses are introduced within these two units.
- The use of connected narrative passages mirrors the Eduqas examination format directly.
- Cultural content maps to Eduqas cultural topics: Roman family, paterfamilias, religion, attitudes to death.

3. Class Baseline Profile — 8MJT

Completed following the Lesson 1 diagnostic assessment. The diagnostic assessed: verb ending recognition (all tenses), noun parsing (all three declensions), and translation approach. Full mark data is in the RAG Intervention Tracker spreadsheet. See also individual intervention record (Section 6) for students flagged at R.

RAG Rating	What It Means	Enter in column as
GREEN	Measurable improvement evidenced. The student demonstrates the skill independently in a subsequent lesson, or test/workbook data shows clear progress attributable to the intervention.	G
AMBER	Partial or inconsistent improvement. The student is moving in the right direction but has not yet consolidated the change. A follow-up intervention is likely needed.	A
RED	No measurable change despite the intervention. The approach needs to be reconsidered. Note: a Red rating does not evidence teacher failure — it evidences that a difficulty was identified, action was taken, and the teacher is now adapting further.	R

Translation Approach key: B = Beasley Method (systematic); S = Semantic inference (word-meaning guessing); M = Mixed / inconsistent.

Student	Vocabulary	Noun Cases (1st/2nd)	Noun Cases (3rd)	Verb Tenses	Translation Approach	Priority Focus	RAG
Tommy Dreamer	G	G	A	G	M	Beasley Method adoption	A
Raven	G	G	G	G	B	Extension: unseen passages	G
Sandman	A	A	R	A	S	3rd declension (all cases)	R
Sabu	G	A	A	G	M	Verb tenses under pressure	A
Rob Van Dam	G	G	G	G	B	Extension: unseen passages	G
Taz	A	A	A	A	M	Method application in passage	A
Shane Douglas	G	G	A	A	S	Future and perfect tense	A
Terry Funk	G	G	G	G	B	Extension: literary analysis	G
Stevie Richards	A	G	A	A	M	Perfect tense recognition	A
Mikey Whipwreck	A	A	R	A	S	3rd declension and dative case	A
Spike Dudley	G	G	A	G	B	3rd declension (genitive)	G
Bubba Ray Dudley	A	A	A	A	S	Systematic method adoption	A

D-Von Dudley	A	A	A	G	M	Accusative vs nominative	A
Lance Storm	G	G	G	G	B	Extension: unseen passages	G
Jerry Lynn	G	A	A	G	M	3rd decl. (genitive / dative)	A
Justin Credible	R	A	R	A	S	All grammar areas — priority	R
Tajiri	G	G	A	G	B	Genitive case in passage	G
Super Crazy	A	A	A	A	S	Verb tense identification	A

CW Anderson	G	G	G	G	B	Extension: unseen passages	G
Simon Diamond	A	A	A	A	M	Beasley Method consistency	A

4. Adaptive Teaching Strategies Register

Each adaptive strategy logged as deployed. Update RAG after the strategy has been in place for at least one lesson. Cross-reference strategy numbers to the Lesson Log in Section 5.

RAG Rating	What It Means	Enter in column as
GREEN	Measurable improvement evidenced. The student demonstrates the skill independently in a subsequent lesson, or test/workbook data shows clear progress attributable to the intervention.	G
AMBER	Partial or inconsistent improvement. The student is moving in the right direction but has not yet consolidated the change. A follow-up intervention is likely needed.	A
RED	No measurable change despite the intervention. The approach needs to be reconsidered. Note: a Red rating does not evidence teacher failure — it evidences that a difficulty was identified, action was taken, and the teacher is now adapting further.	R

#	Strategy	Rationale / Evidence Base	Target Students	Lesson(s)	RAG	Impact Notes
1	**3rd declension reference card**	L1 diagnostic: Sandman, Justin Credible, New Jack unable to distinguish 3rd declension nominative from accusative in isolation. Standard lesson resources insufficient for this foundational gap.	Sandman, J. Credible, New Jack	L2–L12	A	Sandman: significant improvement (L1: 0/4 → L11: 3/4 correct). J. Credible improved R to A. New Jack: engagement improved, accuracy gap persists. Card retained for Unit 2.
2	**Strategic seating (peer modelling)**	L1 diagnostic identified students using S (semantic inference) approach. Placed adjacent to strong B (Beasley Method) users to model annotation behaviour during paired tasks.	Sandman, Bubba Ray, Al Snow, Super Crazy	L2–L12	A	Moderate impact overall. Sandman showed clearest benefit. Al Snow's issue was a parsing/translation disconnect, not method non-adoption — targeted individual strategy (Strat. 4) proved more effective.
3	**Beasley Check (compulsory end-of-task annotation)**	L5 observation: Tommy Dreamer and others reverting to semantic inference under time pressure despite correct method use in low-stakes practice. Method not yet pressure-proof.	Whole class (key: Dreamer, Taz, Shane Douglas)	L5–L12	G	Strong positive impact. By L8, 22/28 completing colour annotation systematically (L1: 8/28). Tommy Dreamer ceased reverting under pressure after L6. Retained as permanent classroom practice.
4	**Say-it-aloud strategy (Al Snow — individual)**	L8 observation: Al Snow annotating accurately but translating incorrectly. Correctly identifies nominative subject but treats it as object in English. Distinct from method non-adoption; not resolved by standard drilling.	Al Snow	L8–L12	G	Clear individual impact. Full translation accuracy from L9 onwards. Method internalised by L12. Pattern documented for future cohorts: parsing/translation disconnect requires this specific individual approach.
5	**Extension unseen passage (high-attaining group)**	L1: Rob Van Dam, Lance Storm, Raven, Terry Funk, Mike Awesome, CW Anderson, Little Guido demonstrably fluent across all assessed areas. At risk of under-challenge if standard provision is the ceiling.	RVD, L. Storm, Raven, T. Funk, M. Awesome, CW Anderson, L. Guido	L2, L5, L8, L11	G	Strong positive impact. Group fully engaged and challenged. RVD and Lance Storm producing A*-quality analysis. RVD model answer displayed as class exemplar. Extension retained for Unit 2.

4b. High Attainer Challenge Register

This register records the specific challenge set for students who were consistently Green across assessed areas. This is the evidence that those students were not simply completing standard tasks more quickly — they were given qualitatively different challenge and their response is recorded here.

Key principle: High attainment in a standard lesson does not evidence effective teaching for that student. What evidences effective teaching is the record of what was done differently because the standard provision was insufficient — and what the student produced as a result.

Student	Why Identified (Baseline Performance)	Specific Challenge Set	Lesson(s)	Evidence of Impact	RAG
Raven	G baseline across all assessed areas. Beasley Method user from L1. Standard lesson provision would not stretch this student.	Extension unseen passage (3 clauses, no vocabulary gloss, deliberate word-order mislead). Annotated model answer produced for class display.	L2, L5, L8, L11	Identified the word-order mislead independently in L8 extension passage — evidence of Method application beyond anything the standard lesson required. Model answer displayed and used in L5 whole-class feedback.	G
Rob Van Dam	G baseline. Fastest and most accurate method user in cohort. At risk of coasting in standard whole-class tasks.	Extension unseen passages throughout. Peer-assessment of partner's work (L5). Exam question design task (L10). Model answer produced and displayed as class exemplar.	L2, L5, L8, L10, L11	A*-quality annotation consistently. Exam question design task produced 3 questions retained for use with next year's cohort — evidence of mastery-level understanding. Model answer referenced in class feedback.	G
Terry Funk	G baseline. Strong vocabulary and fluent method application from L1. Standard translation tasks insufficient for extension.	Extension unseen passages. Optional literary analysis commentary alongside translation at L8 and L11 — offered as a higher-order task not required for GCSE.	L2, L5, L8, L11	Literary analysis commentary at L11 showed sophisticated awareness of narrative technique and authorial choice. This goes beyond any GCSE standard expected at this stage of the course.	G
Lance Storm	G baseline. Strongest systematic method user in the cohort; self-correcting errors before prompting.	Extension programme throughout. Peer explanation of Beasley Check to class at L5. Peer-assessment role. Exam question design task at L10.	L2, L5, L8, L10, L11	Peer explanation in L5 demonstrated deep method understanding (ability to articulate, not just apply). Peer-assessment feedback to partner was specific and technically accurate. Exam questions of high quality.	G
Tajiri	G baseline overall; genitive case in passage context	Extension unseen passages. Targeted genitive-focused passage	L2, L5, L8, L11	Genitive case fully consolidated by L8. Extension passages completed accurately and with	G

	identified as a single area needing consolidation.	at L5 to challenge the one identified gap.		increasing annotation confidence. No further individual challenge needed for Unit 2.	
Spike Dudley	G baseline overall; 3rd declension genitive flagged as area for consolidation despite strong overall performance.	Extension unseen with genitive/dative focus. Additional challenging sentence set at L4.	L2, L4, L8	Genitive fully consolidated by L8. Performing at top of cohort on timed tasks by L11. Demonstrates that targeted micro-challenge within the extension programme is effective.	**G**
Little Guido	G baseline across all areas. Strong and consistent from L1. At risk of under-challenge throughout the unit.	Extension unseen passages. Attempt of a genuine Level 1 Latin text passage (beyond GCSE standard) at L11.	L2, L5, L8, L11	Level 1 passage attempted at L11 with 80% accuracy — significantly beyond any GCSE-standard expectation at this stage. High engagement with the challenge; requested a second passage to take home.	**G**
Mike Awesome	G baseline. Fluent method user; strong across all areas from L1. Would have been unchallenged by standard whole-class provision.	Extension programme. Competitive accuracy challenge with RVD, Lance Storm, Raven at L10 (The Gauntlet competitive format).	L2, L5, L8, L10, L11	Consistently strong extension performance. Gauntlet scores at L10 were the highest of the unit. Competitive format visibly increased engagement and effort beyond standard drilling.	**G**
CW Anderson	G baseline. Systematic Beasley Method from L1; strong grammar recognition across all areas. Standard tasks would have been well within comfort zone.	Extension unseen passages. Exam question design task at L10.	L2, L5, L8, L10, L11	Exam questions produced at L10 were of high technical quality and demonstrated understanding of how grammar can be tested. Extension passages completed with consistent accuracy and full annotation.	**G**

5. Lesson-by-Lesson Evidence Log

Completed after each lesson. The purpose of this log is not to describe what was planned but to record what was observed and what the teacher did in response. Reference strategy numbers from Section 4 where applicable.

RAG Rating	What It Means	Enter in column as
GREEN	Measurable improvement evidenced. The student demonstrates the skill independently in a subsequent lesson, or test/workbook data shows clear progress attributable to the intervention.	G
AMBER	Partial or inconsistent improvement. The student is moving in the right direction but has not yet consolidated the change. A follow-up intervention is likely needed.	A
RED	No measurable change despite the intervention. The approach needs to be reconsidered. Note: a Red rating does not evidence teacher failure — it evidences that a difficulty was identified, action was taken, and the teacher is now adapting further.	R

L	Phase	Key Evidence / What I Noticed	Adaptive Response	Target Students	Strat. #	RAG / Notes
1	*Phase 1*	Diagnostic translation task: 19/28 parsed verb forms accurately in isolation, but only 8/28 applied systematic parsing in connected text. 12 students relied on semantic inference — plausible translations assembled from vocabulary recognition without attending to endings. Sandman, Justin Credible, New Jack: significant gaps in 3rd declension recognition and verb identification.	Lesson plan restructured on the spot: added a timed sentence task to make inference pattern visible under mild pressure. Results photographed as baseline evidence. Decision to lead L2 with 3rd declension rather than 1st/2nd as planned. RVD, Lance Storm, Raven, Terry Funk, Mike Awesome, CW Anderson, Little Guido identified for extension programme.	Sandman, J. Credible, New Jack (support); RVD group (extension)	**—**	—
2	*Phase 1*	3rd declension drilling confirmed diagnostic findings. Sandman confused nominative and accusative in all 4 practice sentences. New Jack unable to identify verb forms reliably — vocabulary knowledge stronger than parsing knowledge. Class mean 3rd decl. recognition: 61% (L1: 43%). Bubba Ray Dudley and Al Snow producing plausible but incorrect translations: endings parsed but function not connected to English meaning.	Seating rearranged: Sandman adjacent to Lance Storm for peer modelling. 3rd declension reference card prepared for New Jack, J. Credible, Sandman. Extension unseen passage given to RVD group. Al Snow flagged for individual strategy — different issue from Sandman.	Sandman, New Jack, J. Credible; RVD group (extension)	**1, 2, 5**	**A**
3	*Phase 1*	3rd declension genitive and dative introduced. Mikey Whipwreck and D-Von Dudley struggling to distinguish dative from accusative in translation context. Class mean for genitive recognition strong (79%) but dative lower (58%).	Additional paired drilling on dative vs accusative identification for Mikey Whipwreck and D-Von Dudley. Taz and Shane Douglas working accurately but slowly — noted for speed-drilling in L4.	Mikey Whipwreck, D-Von Dudley; Taz, Shane Douglas (speed)	**2**	**A**

4	*Phase 1*	Verb tense identification drilling: present and imperfect secure for most. Perfect tense error rate higher (class mean 71%). Stevie Richards and Bam Bam Bigelow consistently confusing perfect with present tense in 1st person singular. Speed-drilling for Taz and Shane Douglas shows improvement.	Additional perfect tense drilling pairs for Stevie Richards and Bam Bam Bigelow. Shane Douglas and Taz: timed competitive exercise with Spike Dudley and Jerry Lynn — clear improvement in fluency.	Stevie Richards, Bam Bam Bigelow; Taz, Shane Douglas (speed)	**3**	**A**
5	*Phase 2*	First Beasley Method lesson. RVD, Lance Storm, Raven adopted colour-annotation immediately, completing all 6 sentences with full accuracy. Tommy Dreamer reverted to semantic inference under time pressure in the final task despite correct annotation in earlier work. Taz, Shane Douglas, Stevie Richards annotating correctly but working slowly; accuracy drops under timed conditions.	Introduced Beasley Check: at 5 mins remaining, all students must annotate before writing English. Method poster placed at front. Individual verbal feedback to Tommy Dreamer: annotation IS the method, not a preliminary step. Lance Storm asked to explain the Check to the class — pedagogical challenge and peer credibility.	Tommy Dreamer, Taz (pressure); RVD group (extension)	**3, 5**	**A**
6	*Phase 2*	Scaffolded sentence translation. Method adoption improving: 17/28 completing annotation systematically (L5: 11/28). Sandman correct on 2/4 sentences — improvement from L1 baseline (0/4). Bubba Ray Dudley still mixing semantic inference with method. Tommy Dreamer: no method reversal today under Beasley Check conditions.	Paired translation with annotation comparison — students compare colour-coding with partner before writing English. This surfaces disagreements about verb identification and forces discussion. Bubba Ray paired with Tajiri for this task.	Bubba Ray Dudley; Sandman (verbal reinforcement)	**2, 3**	**A**
7	*Phase 2*	Targeted drilling session based on L1–L4 diagnostic data. Three stations: 3rd declension station (Sandman, J. Credible, New Jack, Mikey Whipwreck), verb tense station (Stevie Richards, Bam Bam Bigelow, Super Crazy, Shane Douglas), and method fluency station (all others). Strong improvement visible at 3rd declension station.	Differentiated station work running for 25 minutes. Station outputs collected as formative evidence. New Jack engaged and on task throughout — notable improvement in classroom behaviour and effort.	Station-differentiated: see above	**1, 3**	**A**
8	*Phase 2*	First full guided passage under Method discipline. 22/28 completing colour annotation systematically (L1: 8/28). Key finding: Al Snow annotating accurately but translating incorrectly — correctly identifies nominative subject but treats it as object in English. Different problem from method non-adoption. Sandman: 3/4 sentences correct (L1: 0/4).	Say-it-aloud strategy deployed for Al Snow: after annotating, must state what each element DOES before writing English. Positive reinforcement for Sandman with verbal feedback referencing L1 data. Extension group given additional unseen with deliberate word-order mislead to challenge assumptions.	Al Snow (individual strategy); Sandman (verbal reinforcement)	**4**	**G**
9	*Phase 3*	Timed translation under exam-style conditions (30 minutes, 5 sentences). Class mean:	Written feedback to all students referencing baseline. Three	Sandman, New Jack, J. Credible (check-in L10)	**4**	**G**

		14.8/20 (cf. L1 diagnostic: 11.2/20). All but 3 students (Sandman, New Jack, Justin Credible) scoring above diagnostic baseline. Tommy Dreamer: strong performance, no method reversal. Al Snow: first fully accurate timed translation.	underperforming students identified for additional check-in at start of L10. Extension group: asked to annotate and produce a written commentary on their own method as exam preparation.			
10	*Phase 3*	Grammar games session (The Gauntlet): team-based competitive drilling. Highest engagement of the unit so far. New Jack — who has been withdrawn in whole-class tasks — visibly competitive and engaged throughout. Strong evidence that game format reduces anxiety for lower-confidence students.	Observation noted: game format particularly beneficial for New Jack and Balls Mahoney. Flagged for use in Unit 2. Lance Storm and RVD: asked to design one question each for next year's cohort — higher-order task.	New Jack, Balls Mahoney (engagement); RVD, Lance Storm (extension task)	**5**	**G**
11	*Phase 3*	Formative mini-assessment (20 marks). Class mean: 16.4/20 (L1 diagnostic: 11.2/20). Sandman: 14/20 (L1: 5/20). Justin Credible: 9/20, improved from R to A (L1: 3/20). New Jack: 6/20 (R maintained) — consistent effort but gap persists. Al Snow: 19/20, full accuracy. Tommy Dreamer: 18/20.	Class feedback on assessment — errors logged by type. New Jack: adapted L12 task with vocab glossary. Justin Credible: specific verbal feedback on improvement trajectory; encouraged to attempt extension passage. Written feedback to all 28 referencing individual progress from L1.	New Jack (adapted task); J. Credible (extension encouragement)	**1, 4**	**G**
12	*Phase 3*	Final lesson. 21/28 now using Beasley Method systematically (L1: 8/28). New Jack: adapted passage 70% accuracy. Al Snow: full accuracy, method internalised. Oral feedback round: each student named their strongest improvement. Classroom atmosphere: confident, positive. Clear contrast with L1 diagnostic anxiety.	Workbooks collected and annotated. End-of-unit oral feedback round completed. New Jack flagged for continued support in Unit 2. Section 7 completed. Extension group workbooks kept for display as exemplar evidence.	Whole class	**—**	**G**

6. Individual Intervention Record

Interventions for specific students beyond the whole-class adaptive strategies in Section 4. This section provides the complete individual impact narrative: here is where this student started, here is what I noticed, here is what I specifically did, and here is the outcome.

RAG Rating	What It Means	Enter in column as
GREEN	Measurable improvement evidenced. The student demonstrates the skill independently in a subsequent lesson, or test/workbook data shows clear progress attributable to the intervention.	G
AMBER	Partial or inconsistent improvement. The student is moving in the right direction but has not yet consolidated the change. A follow-up intervention is likely needed.	A
RED	No measurable change despite the intervention. The approach needs to be reconsidered. Note: a Red rating does not evidence teacher failure — it evidences that a difficulty was identified, action was taken, and the teacher is now adapting further.	R

Student	L	Issue Identified	Intervention	Outcome	RAG
Sandman	**2**	Unable to distinguish 3rd decl. nominative from accusative in isolation; 0/4 correct on L1 diagnostic. Scoring significantly below ability on grammar tasks.	3rd declension reference card (L2). Strategic seating adjacent to Lance Storm. Individual verbal feedback after L2 and L4 referencing specific error patterns from diagnostic.	L11 assessment: 14/20 (L1 baseline: 5/20). Statistically significant improvement. 3rd decl. accuracy now consistent in low-pressure contexts; some errors remain under timed conditions. Trajectory strongly positive.	**A**
Justin Credible	**1**	Significant gaps across all assessed areas. R at baseline. Combination of foundational gaps in verb recognition and evident confidence issues in whole-class tasks.	3rd declension reference card. Closely monitored in paired tasks. Individual written feedback on L5 and L8 work. Verbal encouragement in L11 to attempt extension passage.	Improved from R to A by L11: 9/20 (L1: 3/20). Gap remains but trajectory positive. No SENCO referral required at this stage. Continue monitoring in Unit 2.	**A**
New Jack	**1**	Most significant gaps in cohort across all assessed areas. Verb form recognition not secure. Limited initial engagement in L1 tasks; apparent anxiety in whole-class translation.	3rd declension reference card. Vocabulary review sheet after L2. Individual check-ins at L4, L7, L10. Adapted L12 task with vocab glossary. Email home after L7 re: homework non-completion. Individual meeting at L9.	L12 adapted passage: 70% accuracy. Engagement markedly improved from L2. Standard assessment: 6/20 (R maintained). Clear evidence of progress from starting point. SENCO discussed with HOD. Priority support in Unit 2.	**R**
Al Snow	**8**	Accurate colour annotation but incorrect translation. Correctly identifies nominative subject but treats it as direct object in English. Parsing/translation disconnect — not resolved by standard method drilling.	Say-it-aloud strategy: after annotating, state what each element DOES before writing English. Deployed from L8. Individual check at end of L9 to verify strategy working.	Full translation accuracy from L9 onwards. Method internalised by L12. This pattern requires this specific individual approach. Documented for future reference as a distinct intervention type.	**G**
Tommy Dreamer	**5**	Reverting to semantic inference under time pressure despite	Individual verbal feedback in L5: annotation IS the	No recurrence of method reversal after L6. Method fully pressure-proofed by L8. No further individual	**G**

		correct method use in low-stakes practice. Method not yet pressure-proof under exam-style conditions.	method. Placed in competitive drilling group L6–L8. Beasley Check used as structural support.	intervention required.	
Rob Van Dam	**1**	Significantly above average across all assessed areas at baseline. At risk of under-challenge if standard lesson provision is the ceiling.	Extension unseen passages at L2, L5, L8, L11. Peer-assessment of Lance Storm's work at L5. Model answer produced and displayed as class exemplar. Asked to design exam questions for next cohort at L10.	Full engagement. Consistently A*-quality translation and annotation. Model answer referenced in whole-class feedback as an exemplar of Method application.	**G**
Lance Storm	**1**	As above — significantly above average at baseline. Strongest systematic method user in cohort from L1.	Extension programme throughout. Peer explanation of Beasley Check to class at L5 — pedagogical challenge. Exam question design task at L10.	Outstanding performance throughout. Peer explanation role benefited both Storm and observing students. Asked to act as method ambassador in L6 paired work.	**G**
New Jack	**7**	Homework non-completion identified at L6 check-in. Falling further behind peers. L6 task not attempted.	Email home after L7. Simplified homework task (matching exercise) for L8–L10. Individual meeting at start of L9.	Homework completion improved from L8 onwards. Engagement in class tasks higher after L9 meeting. Attitudinal improvement clear; performance gap remains.	**A**

7. End of Unit Impact Summary

7.1 Overall Class Progress

Overall unit outcome: strong. The class mean on the L11 formative assessment (16.4/20) represents a 46% improvement on the L1 diagnostic mean (11.2/20). 21/28 students now applying the Beasley Method systematically (L1: 8/28). 16/28 students moved from A or R baseline to G or A final rating. Only one student (New Jack) maintained an R rating at the end of the unit, and in this case significant progress from the starting point is clearly evidenced in the adapted passage work and in the lesson log.

The most significant evidence for the Beasley Method specifically: the reduction in semantic inference usage from 12 students at baseline to 4 at end of unit, combined with the shift from 8/28 systematic method users to 21/28. Students who adopted the method showed significantly higher accuracy in the L11 assessment, and the qualitative evidence in the lesson log (workbook annotation progression, verbal feedback observations) supports this correlation.

The unit also evidenced effective differentiation: the extension programme (Strategy 5) challenged 7 high-attaining students who would otherwise have been under-stretched, and the individual strategies for Sandman (3rd declension reference card), Al Snow (say-it-aloud), and Tommy Dreamer (Beasley Check) each produced targeted, evidenced impact.

7.2 Strategy Effectiveness Summary

#	Strategy Summary	Final RAG	Future Planning Note
1	3rd declension reference card	A	Retain for Unit 2 for Sandman, J. Credible, New Jack. Review whether a fuller 3rd declension drill sequence should be embedded earlier in the unit.
2	Strategic seating (peer modelling)	A	Retain but be more selective: most effective for students with method non-adoption (Sandman) rather than students with other issues (Al Snow). Pre-identify in diagnostic.
3	Beasley Check (compulsory end-of-task annotation)	G	Retain as a permanent classroom practice. The structural nature of the Check appears to be the key factor — it removes the option to bypass annotation under pressure.
4	Say-it-aloud strategy (Al Snow — individual)	G	Document and retain as a distinct intervention type for future cohorts. Should be deployed sooner (L6 rather than L8) if the issue is identified early.
5	Extension unseen passage (high-attaining group)	G	Retain and expand. Consider formalising as a permanent enrichment programme. RVD model answer to be used as an exemplar resource in Unit 2.

7.3 Individual Student Summary — End of Unit

Summary of progress for all 28 students: baseline RAG, final RAG, key interventions or achievements, and whether unit objectives were met.

Student	Baseline RAG	Final RAG	Key Interventions / Progress Narrative	Met Obj ?
Tommy Dreamer	A	G	Beasley Check (Strat. 3) resolved pressure-reversal by L6. Consistent method user from L7 onwards. Clear improvement from A to G.	Y
Raven	G	G	Extension unseen passages throughout. Consistently high-quality analytical work. Exceeded unit objectives.	Y
Sandman	R	A	3rd decl. reference card + peer modelling (Strats. 1, 2). L11: 14/20 (L1: 5/20). Significant progress; some gaps under timed conditions remain.	Part

Sabu	A	A	Verb tense accuracy improved through drilling. Method adoption partially consistent. Some pressure-reversal in L12. Monitor in Unit 2.	Part
Rob Van Dam	G	G	Extension programme. A*-quality annotation and analysis throughout. Model answer displayed as class exemplar. Exceeded objectives.	Y
Taz	A	G	Method adoption improved through Beasley Check. Speed and accuracy both stronger by L11. Objectives met.	Y
Shane Douglas	A	A	Future/perfect tense gaps partially addressed. Method adoption improved but inconsistent under exam-style pressure. Monitor in Unit 2.	Part
Terry Funk	G	G	Extension programme. Consistently strong performance throughout. Exceeded objectives.	Y
Stevie Richards	A	G	Perfect tense recognition improved through targeted drilling (L4). Consistent method user from L7. Objectives met.	Y
Mikey Whipwreck	A	A	3rd decl. and dative improved but not fully consolidated. Mixed method approach continues. Priority area for Unit 2.	Part
Spike Dudley	G	G	Genitive case in connected text consolidated. Consistent Beasley Method user throughout. Objectives met.	Y
Bubba Ray Dudley	A	A	Method adoption improved through strategic seating and paired annotation. Still inconsistent under time pressure. Monitor in Unit 2.	Part
D-Von Dudley	A	A	Accusative/nominative distinction stronger. Method adoption developing. Some inconsistency remains. Monitor in Unit 2.	Part
Lance Storm	G	G	Extension programme. Peer explanation role at L5. Outstanding performance throughout. Exceeded objectives.	Y
Jerry Lynn	A	G	3rd decl. genitive/dative consolidated through drilling and station work (L7). Consistent method user from L9. Objectives met.	Y
Justin Credible	R	A	Improved R to A. Ref. card + individual written feedback (Strats. 1, individual). L11: 9/20 (L1: 3/20). Gap remains. Monitor in Unit 2.	Part
Tajiri	G	G	Genitive in passage context consolidated. Consistent method user throughout. Objectives met.	Y
Super Crazy	A	A	Verb tense identification improved through station work. Method adoption developing but not fully consistent. Follow up in Unit 2.	Part
Little Guido	G	G	Extension programme. High-quality analytical performance. Exceeded objectives.	Y
Al Snow	A	G	Say-it-aloud strategy (Strat. 4, L8) resolved parsing/translation disconnect. Full accuracy from L9. Objectives met.	Y
New Jack	R	R	Most significant gaps in cohort. Engagement improved markedly. Adapted tasks throughout. L12: 70% on adapted passage. SENCO discussed. Priority for Unit 2 support.	N
Balls Mahoney	A	A	3rd decl. noun endings improved through station work. Method adoption developing. Foundational gaps remain. Continue in Unit 2.	Part
Rhino	A	G	3rd decl. consolidated through drilling and station work. Method adoption consistent from L8. Improvement trajectory clear. Objectives met.	Y
Mike Awesome	G	G	Extension programme. High-quality performance throughout. Exceeded objectives.	Y
Bam Bam Bigelow	A	A	Perfect tense (all persons) improved through targeted drilling (L4). Method partially consistent. Follow up in Unit 2.	Part
Steve Corino	A	A	Noun case identification in passage context improved. Method adoption variable. Monitor in Unit 2.	Part

CW Anderson	G	G	Extension programme. Consistently strong performance throughout. Exceeded objectives.	Y
Simon Diamond	A	A	Method consistency improving. Some regression in L12 exam-style task. Partially met. Monitor.	Part

7.4 What This Unit Tells Us About Future Planning

The unit evidences that this cohort is now ready to encounter new grammar content: the majority of students have secure, fluent command of the forms required before participles and the passive voice are introduced. However, three areas require continued attention in Unit 2: (1) New Jack requires continued individual support across all grammar areas and should be formally referred to SENCO if progress stalls; (2) Shane Douglas, Mikey Whipwreck, and Bubba Ray Dudley all showed inconsistency under time pressure and may need continued Beasley Check support; (3) the extension group (RVD, Lance Storm, Raven, Terry Funk, Mike Awesome, CW Anderson, Little Guido) should be offered structured extension provision from Lesson 1 of Unit 2 rather than being identified mid-unit as occurred here.

The game-based competitive drilling format (The Gauntlet, L10) produced the highest engagement of the unit and appeared particularly beneficial for lower-confidence students. This format should be embedded earlier and more frequently in Unit 2.

8. Document History

Date	Version	Notes
March 2026	1.0 — Initial	Document created. Baseline data entered from L1 diagnostic. Student list, strategies register, and lesson log framework in place.
27 March 2026	1.12 — Final	All 12 lessons logged. Section 7 end-of-unit impact summary completed. Document complete for inspection use.
